Creating a Photo Collage

BY CONNIE NICHOL

Sometimes it takes more than a *single* photo to tell a story.

Collages are a great way to showcase several photos together to capture a moment. There is a huge variety of phone apps that can easily create different types of photo collages. These apps can also be used to add frames and different effects to your pictures. Some of our

favourite apps are Fuzel, Diptic, PhotoCollage, and PicCollage. They are all straightforward and simple to use, and the resultant collage can be used in digital scrapbooking or printed and scrapbooked more traditionally.

Scraps of Info
Kim used the Fuzel app to create the photo collage on her layout.

Scraps of Info
 The photo was created with the Bubble Frame App. You can add circular text and fade out a photo like I did with the legs. Photos were taken on my big girl camera Nikon D600, imported onto my iPad, edited in the Snapseed app and imported into the Bubble Frame app. - Kerry Engel
